FORCED SECURITY SERVICE (FSS)

INTRODUCTION

The Forced Security Service (FSS) system can solve various problems that may occur in the computer, and various problems that may occur in the computer can cause serious damage to the user. The FSS system created to solve these problems is very easy to install and manage.

FUNCTION

Block Ransomware

Blocks ransomware attacks in advance to prevent user PC document and file encryption

Realtime monitoring

Real-time detection and defense against threats that occur while using a PC, such as Internet browsing and program installation

INSTALL

When downloading the program, run FS1.exe to complete the installation automatically. On some computers it may conflict with windows defender. However, these crashes are common crashes that can occur when errors occur with each other. If you anticipate such a crash or want to avoid it, you can close window defender and install it.

Our Forced Security Service (FSS) is open source and does not charge any royalties.
